

DIFFUSER CARE

BOTTLENOSE

BOTTLENOSE

With your reed diffuser
purchase you have
made a splash in our
mission to protect our
dolphin family.
Thank You!

Reed Diffusers offer a great way to add a fresh scent to your home, office, or personal area. The natural fiber reeds consistently emit a refreshing fragrance throughout your space.

Placing them in high traffic areas allows the scent to disperse with airflow as people pass by although it may not fill the entire area with fragrance.

Unlike candles, reed diffusers are flame-free, making them a safer option.

They can be positioned anywhere without needing electricity.

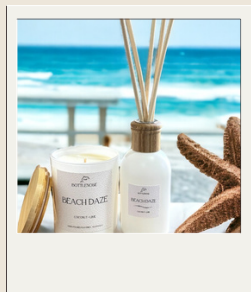

Reed diffusers work continuously, requiring only weekly reed rotation for maintenance.

How to care for your Reed Diffuser

When you receive your reed diffuser make sure you remove the stopper before placing the reeds into the bottle.

Where should I place my reed Diffuser

Avoid placing it in direct sunlight, heat sources or drafty areas. Heat and airflow can accelerate the evaporation of the fragrance oil reducing the lifespan

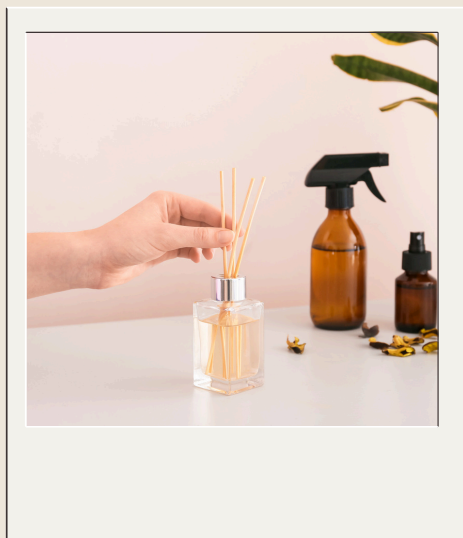

How often should I flip the reeds

Flipping your reed sticks every so often provides a fresh burst of fragrance and helps prevent the reeds from getting clogged.

We recomend doing tjhis around once a week.

To do this, take the reeds out and put the dry end into the vessel.

Why cant I smell my Reed Diffuser?

If you find that your Reed Diffuser's scent is lacking, it could be the reeds rather than the oil.

Over time. the reeds simply lose their ability to be able to diffuse scents effectively.

Sometimes this can be because they have become clogged with dust and oil.

Warning

- Do not light the diffuser reeds
- Ensure the reed diffuser is placed outside of the reach of children and pets
- Ensure the reed diffuser is in an area it will not be knocked over

WE HOPE YOU ENJOY
YOUR DIFFUSER.
